

## Ray Casting

MIT EECS 6.837, Cutler and Durand

1

## Last Time?

- Luxo Jr.
- Applications of Computer Graphics
- Overview of the semester
- IFS
  - Assignment 0 due tomorrow @ 11:59pm
- Questions?

MIT EECS 6.837, Cutler and Durand

2

## Notes on Assignments

- Make sure you turn in a **linux** or **windows** executable (so we can test your program)
- Don't use athena dialup
- In your `README.txt`
  - time spent, collaborators, known bugs, extensions
- `6.837-staff@graphics.csail.mit.edu`

MIT EECS 6.837, Cutler and Durand

3

## Administrivia: Lab & Office Hours

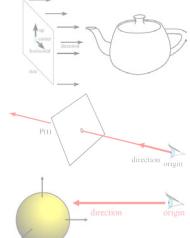

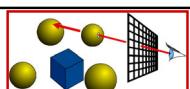

- Barb
  - Mondays 6-8pm in W20-575
- Fredo
  - Tuesdays 6-7pm in W20-575
- Rob
  - Wednesdays 8-11pm in W20-575
- Send email to make an appointment for some other time

MIT EECS 6.837, Cutler and Durand

4

## Overview of Today

- Ray Casting Basics
- Camera and Ray Generation
- Ray-Plane Intersection
- Ray-Sphere Intersection

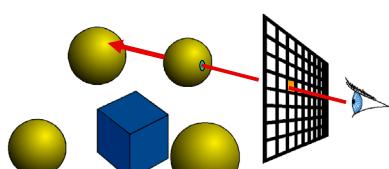

MIT EECS 6.837, Cutler and Durand

5

## Ray Casting

For every pixel  
Construct a ray from the eye  
For every object in the scene  
    Find intersection with the ray  
    Keep if closest

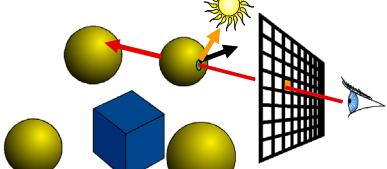

MIT EECS 6.837, Cutler and Durand

6

## Shading

```
For every pixel  
Construct a ray from the eye  
For every object in the scene  
Find intersection with the ray  
Keep if closest  
Shade depending on light and normal vector
```

MIT EECS 6.837, Cutler and Durand

7

## A Note on Shading

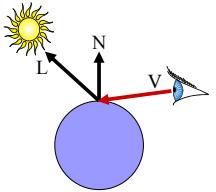

- Surface/Scene Characteristics:

- surface normal
- direction to light
- viewpoint

- Material Properties

- Diffuse (matte)
- Specular (shiny)
- ...

- Much more next Thursday!

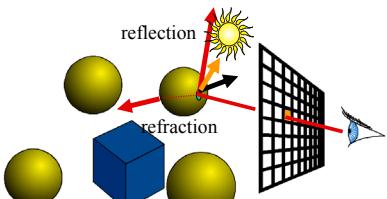

MIT EECS 6.837, Cutler and Durand

8

## Ray Tracing

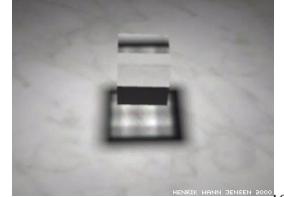

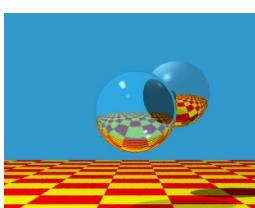

- Secondary rays (shadows, reflection, refraction)
- In a couple of weeks

MIT EECS 6.837, Cutler and Durand

9

## Ray Tracing

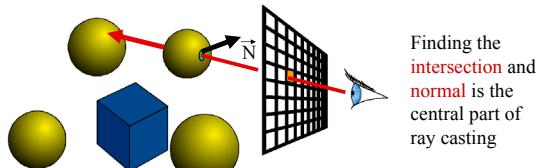

MIT EECS 6.837, Cutler and Durand

HENK HAHN DEHEEN 2000 10

## Ray Casting

```
For every pixel  
Construct a ray from the eye  
For every object in the scene  
Find intersection with the ray  
Keep if closest  
Shade depending on light and normal vector
```

MIT EECS 6.837, Cutler and Durand

11

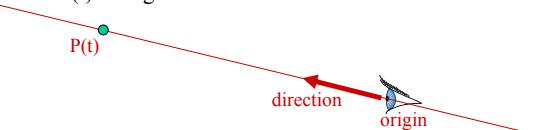

## Ray Representation?

- Two vectors:

- Origin
- Direction (normalized is better)

- Parametric line

$$P(t) = \text{origin} + t * \text{direction}$$

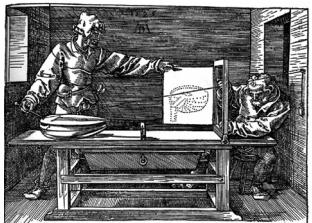

MIT EECS 6.837, Cutler and Durand

12

## Durer's Ray Casting Machine

- Albrecht Durer, 16<sup>th</sup> century

MIT EECS 6.837, Cutler and Durand

13

## Durer's Ray Casting Machine

- Albrecht Durer, 16<sup>th</sup> century

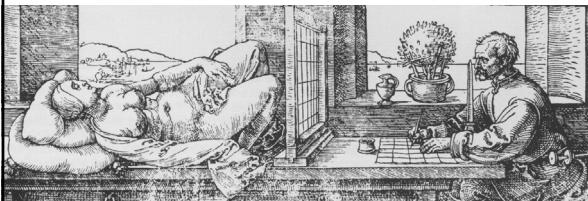

MIT EECS 6.837, Cutler and Durand

14

## Durer's Ray Casting Machine

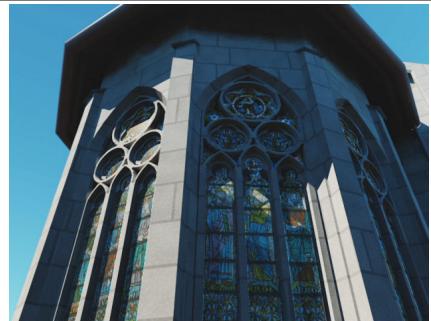

- Albrecht Durer, 16<sup>th</sup> century

MIT EECS 6.837, Cutler and Durand

15

## Questions?

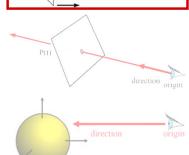

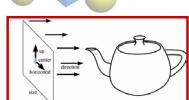

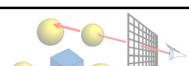

Henrik Wann Jensen & Stephen Duck

MIT EECS 6.837, Cutler and Durand

16

## Overview of Today

- Ray Casting Basics
- Camera and Ray Generation
- Ray-Plane Intersection
- Ray-Sphere Intersection

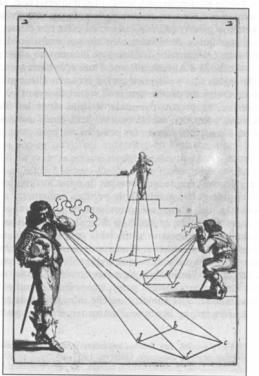

MIT EECS 6.837, Cutler and Durand

17

## Cameras

For every pixel  
Construct a ray from the eye  
For every object in the scene  
Find intersection with ray  
Keep if closest

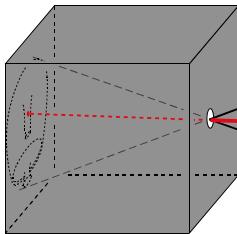

Abraham Bosse, *Les Perspecteurs*. Gravure extraite de la *Manière*

MIT EECS 6.837, Cutler and Durand

18

## Pinhole Camera

- Box with a tiny hole
- Inverted image
- Similar triangles

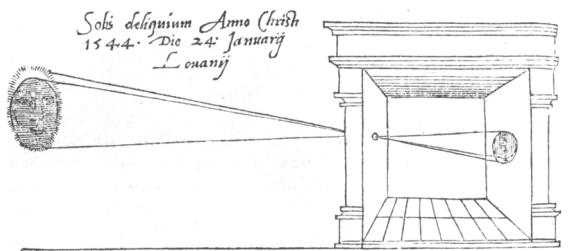

MIT EECS 6.837, Cutler and Durand

- Perfect image if hole infinitely small
- Pure geometric optics
- No depth of field issue

19

## Oldest Illustration

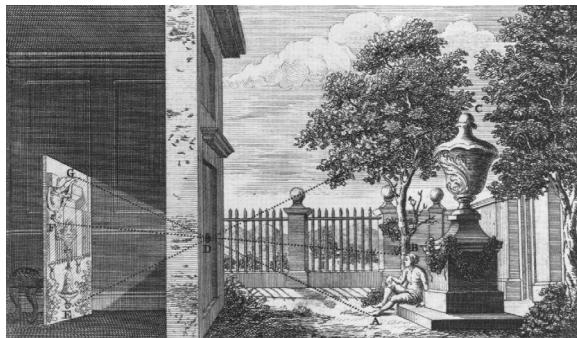

- From R. Gemma Frisius, 1545

MIT EECS 6.837, Cutler and Durand

20

## Camera Obscura

MIT EECS 6.837, Cutler and Durand

21

## Camera Obscura Today

Abelardo Morell  
[www.abelardomorell.net](http://www.abelardomorell.net)

MIT EECS 6.837, Cutler and Durand

Addicted to Love

## Camera Obscura in Art

### VERMEER'S CAMERA

Uncovering the Truth Behind the Masterpieces

"Compulsively readable"  
Sunday Times

PHILIP STEADMAN

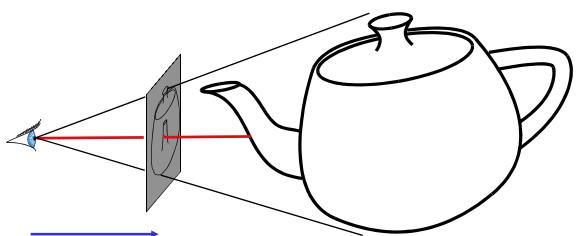

Johannes Vermeer ~1665

MIT EECS 6.837, Cutler and Durand

23

## Simplified Pinhole Camera

- Eye-image pyramid (frustum)
- Note that the distance/size of image are arbitrary

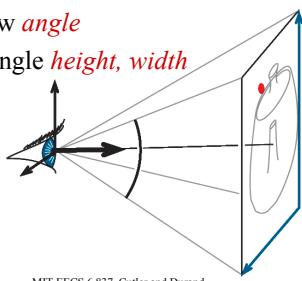

MIT EECS 6.837, Cutler and Durand

24

## Camera Description?

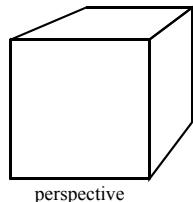

- Eye point  $e$  (center)
- Orthobasis  $u, v, w$  (horizontal, up, -direction)
- Field of view angle
- Image rectangle height, width

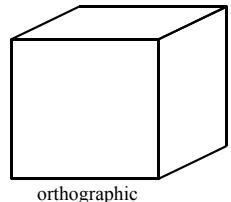

MIT EECS 6.837, Cutler and Durand

25

## Perspective vs. Orthographic

perspective

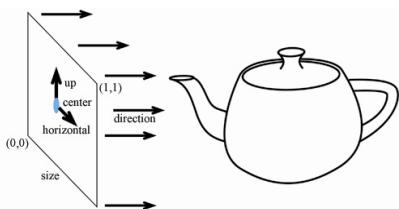

orthographic

- Parallel projection
- No foreshortening
- No vanishing point

MIT EECS 6.837, Cutler and Durand

26

## Orthographic Camera

### Ray Generation?

- Origin = center + (x-0.5)\*size\*horizontal + (y-0.5)\*size\*up
- Direction is constant

MIT EECS 6.837, Cutler and Durand

27

## Other Weird Cameras

- E.g. fish eye, omnimax, panorama

MIT EECS 6.837, Cutler and Durand

28

## Questions?

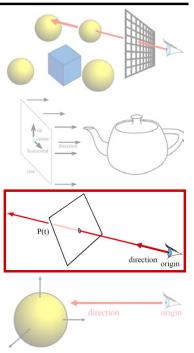

MIT EECS 6.837, Cutler and Durand

29

## Overview of Today

- Ray Casting Basics
- Camera and Ray Generation
- Ray-Plane Intersection
- Ray-Sphere Intersection

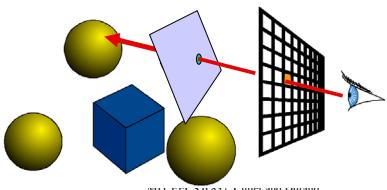

MIT EECS 6.837, Cutler and Durand

30

## Ray Casting

For every pixel  
 Construct a ray from the eye  
 For every object in the scene  
 Find intersection with the ray  
 Keep if closest

First we will study ray-plane intersection

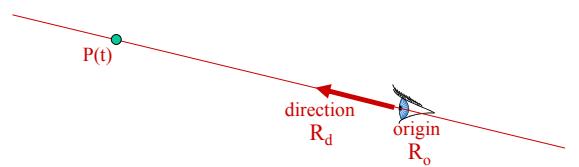

MIT EECS 6.837, Cutler and Durand

31

## Recall: Ray Representation

- Parametric line
- $P(t) = R_o + t * R_d$
- Explicit representation

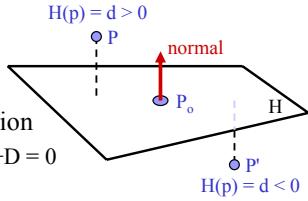

MIT EECS 6.837, Cutler and Durand

32

## 3D Plane Representation?

- Plane defined by
  - $P_o = (x,y,z)$
  - $n = (A,B,C)$
- Implicit plane equation
 
$$H(P) = Ax+By+Cz+D = 0$$

$$= n \cdot P + D = 0$$
- Point-Plane distance?
  - If  $n$  is normalized, distance to plane,  $d = H(P)$
  - $d$  is the *signed distance*!

MIT EECS 6.837, Cutler and Durand

33

## Explicit vs. Implicit?

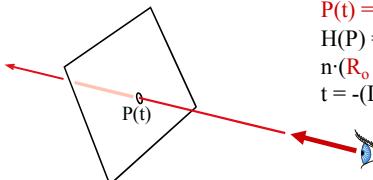

- Ray equation is explicit     $P(t) = R_o + t * R_d$ 
  - Parametric
  - Generates points
  - Hard to verify that a point is on the ray
- Plane equation is implicit     $H(P) = n \cdot P + D = 0$ 
  - Solution of an equation
  - Does not generate points
  - Verifies that a point is on the plane
- Exercise: Explicit plane and implicit ray

MIT EECS 6.837, Cutler and Durand

34

## Ray-Plane Intersection

- Intersection means both are satisfied
- So, insert explicit equation of ray into implicit equation of plane & solve for  $t$

MIT EECS 6.837, Cutler and Durand

35

$$P(t) = R_o + t * R_d$$

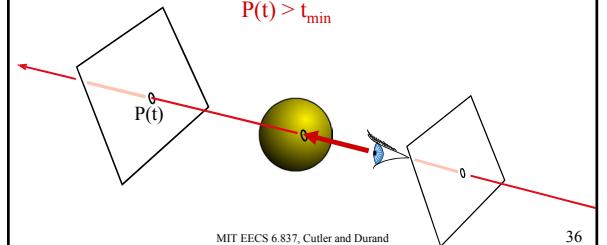

$$H(P) = n \cdot P + D = 0$$

$$n \cdot (R_o + t * R_d) + D = 0$$

$$t = -(D + n \cdot R_o) / n \cdot R_d$$

## Additional Housekeeping

- Verify that intersection is closer than previous
 
$$P(t) < t_{current}$$
- Verify that it is not out of range (behind eye)
 
$$P(t) > t_{min}$$

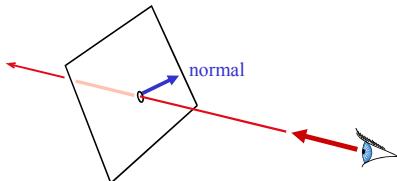

MIT EECS 6.837, Cutler and Durand

36

## Normal

- For shading
  - diffuse: dot product between light and normal
- Normal is constant

MIT EECS 6.837, Cutler and Durand

37

## Questions?

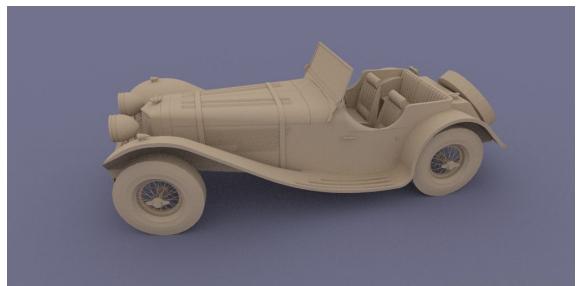

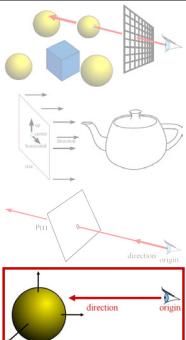

Image by Henrik Wann Jensen

MIT EECS 6.837, Cutler and Durand

38

## Overview of Today

- Ray Casting Basics
- Camera and Ray Generation
- Ray-Plane Intersection
- Ray-Sphere Intersection**

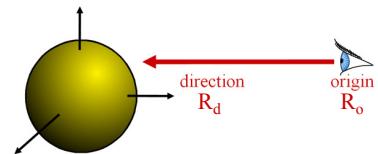

MIT EECS 6.837, Cutler and Durand

39

## Sphere Representation?

- Implicit sphere equation
  - Assume centered at origin (easy to translate)
  - $H(P) = P \cdot P - r^2 = 0$

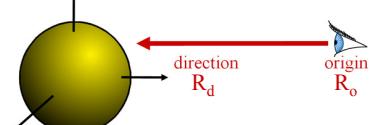

MIT EECS 6.837, Cutler and Durand

40

## Ray-Sphere Intersection

- Insert explicit equation of ray into implicit equation of sphere & solve for t

$$\begin{aligned} P(t) &= R_o + tR_d & H(P) &= P \cdot P - r^2 = 0 \\ (R_o + tR_d) \cdot (R_o + tR_d) - r^2 &= 0 \\ R_d \cdot R_d t^2 + 2R_d \cdot R_o t + R_o \cdot R_o - r^2 &= 0 \end{aligned}$$

MIT EECS 6.837, Cutler and Durand

41

## Ray-Sphere Intersection

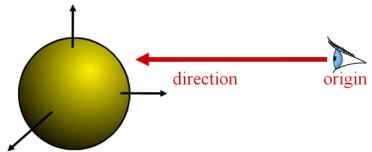

- Quadratic:  $at^2 + bt + c = 0$ 
  - $a = 1$  (remember,  $\|R_d\| = 1$ )
  - $b = 2R_d \cdot R_o$
  - $c = R_o \cdot R_o - r^2$
- with discriminant  $d = \sqrt{b^2 - 4ac}$
- and solutions  $t_{\pm} = \frac{-b \pm d}{2a}$

MIT EECS 6.837, Cutler and Durand

42

## Ray-Sphere Intersection

- 3 cases, depending on the sign of  $b^2 - 4ac$
- What do these cases correspond to?
- Which root ( $t_+$  or  $t_-$ ) should you choose?  
– Closest positive! (usually  $t_-$ )

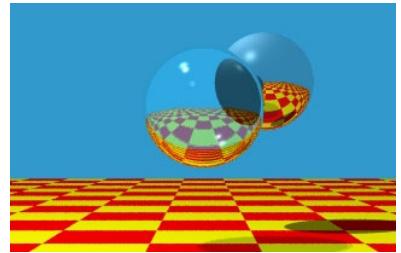

MIT EECS 6.837, Cutler and Durand

43

## Ray-Sphere Intersection

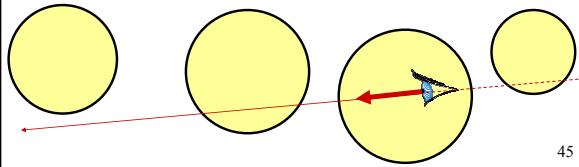

- It's so easy that all ray-tracing images have spheres!

44

## Geometric Ray-Sphere Intersection

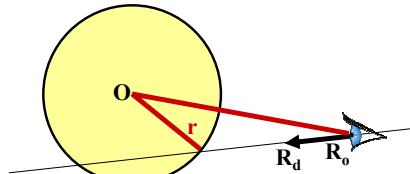

- Shortcut / easy reject
- What geometric information is important?
  - Ray origin inside/outside sphere?
  - Closest point to ray from sphere origin?
  - Ray direction: pointing away from sphere?

45

## Geometric Ray-Sphere Intersection

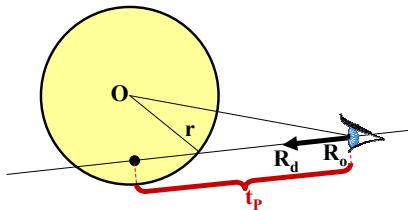

- Is ray origin **inside/outside/on** sphere?
  - $(R_o \cdot R_o < r^2) / (R_o \cdot R_o > r^2) / (R_o \cdot R_o = r^2)$
  - If origin on sphere, be careful about degeneracies...

46

## Geometric Ray-Sphere Intersection

- Is ray origin **inside/outside/on** sphere?
- Find closest point to sphere center,  $t_p = -R_o \cdot R_d$ 
  - If origin outside &  $t_p < 0 \rightarrow$  no hit

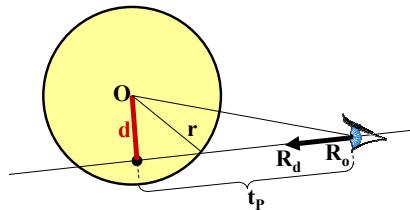

MIT EECS 6.837, Cutler and Durand

47

## Geometric Ray-Sphere Intersection

- Is ray origin **inside/outside/on** sphere?
- Find closest point to sphere center,  $t_p = -R_o \cdot R_d$ .
- Find squared distance,  $d^2 = R_o \cdot R_o - t_p^2$ 
  - If  $d^2 > r^2 \rightarrow$  no hit

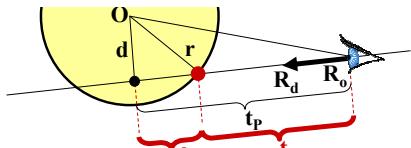

MIT EECS 6.837, Cutler and Durand

48

## Geometric Ray-Sphere Intersection

- Is ray origin inside/outside/on sphere?
- Find closest point to sphere center,  $t_p = -\mathbf{R}_o \cdot \mathbf{R}_d$ .
- Find squared distance:  $d^2 = \mathbf{R}_o \cdot \mathbf{R}_o - t_p^2$
- Find distance ( $t'$ ) from closest point ( $t_p$ ) to correct intersection:  $t'^2 = r^2 - d^2$ 
  - If origin outside sphere  $\rightarrow t = t_p - t'$
  - If origin inside sphere  $\rightarrow t = t_p + t'$

49

## Geometric vs. Algebraic

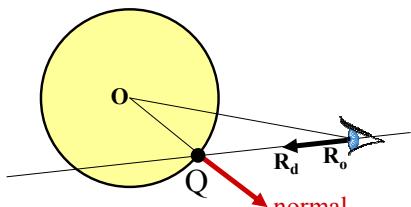

- Algebraic is simple & generic
- Geometric is more efficient
  - Timely tests
  - In particular for rays outside and pointing away

MIT EECS 6.837, Cutler and Durand

50

## Sphere Normal

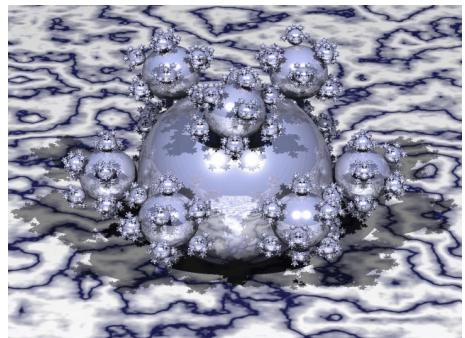

- Simply  $\mathbf{Q}/\|\mathbf{Q}\|$ 
  - $\mathbf{Q} = \mathbf{P}(t)$ , intersection point
  - (for spheres centered at origin)

MIT EECS 6.837, Cutler and Durand

51

## Questions?

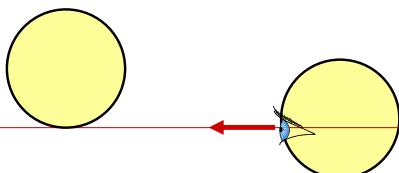

MIT EECS 6.837, Cutler and Durand

52

## Precision

- What happens when
  - Origin is on an object?
  - Grazing rays?
- Problem with floating-point approximation

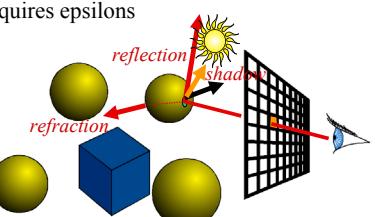

MIT EECS 6.837, Cutler and Durand

53

## The evil $\epsilon$

- In ray tracing, do NOT report intersection for rays starting at the surface (no false positive)
  - Because secondary rays
  - Requires epsilons

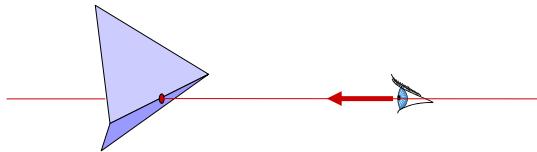

MIT EECS 6.837, Cutler and Durand

54

## The evil ε: a hint of nightmare

- Edges in triangle meshes
  - Must report intersection (otherwise not watertight)
  - No false negative

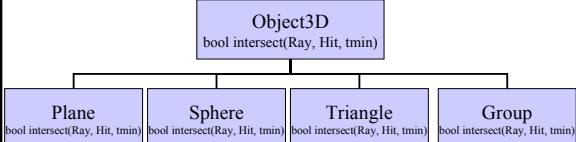

MIT EECS 6.837, Cutler and Durand

55

## Object-Oriented Design

- We want to be able to add primitives easily
  - Inheritance and virtual methods
- Even the scene is derived from Object3D!

MIT EECS 6.837, Cutler and Durand

57

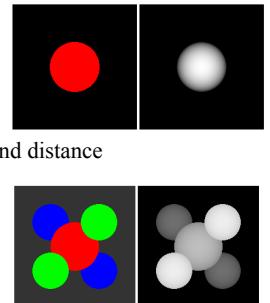

## Questions?

MIT EECS 6.837, Cutler and Durand

59

## Assignment 1: Ray Casting

- Write a basic ray caster
  - Orthographic camera
  - Sphere Intersection
  - Main loop rendering
  - 2 Display modes: color and distance
- We provide:
  - Ray: origin, direction
  - Hit: t, Material, (*normal*)
  - Scene Parsing

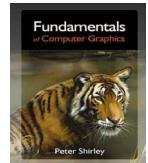

MIT EECS 6.837, Cutler and Durand

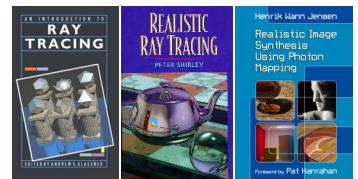

56

## Graphics Textbooks

- Recommended for 6.837:  
Peter Shirley  
*Fundamentals of Computer Graphics*  
AK Peters

- Ray Tracing

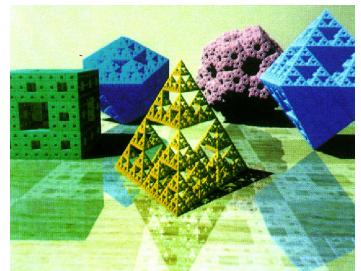

MIT EECS 6.837, Cutler and Durand

58

## Next Time: More Ray Casting

- Other primitives
  - Boxes
  - Polygons
  - Triangles
  - IFS?

MIT EECS 6.837, Cutler and Durand

60
